

Winner OrluVictor

Full-Stack & Backend Engineer | Cloud Infrastructure & DevOps | SaaS Products

winnerbrown9@gmail.com | +234 814 231 0497 | buildwithwinner.name.ng | Remote / Nigeria

PROFESSIONAL SUMMARY

Full-Stack and Backend Engineer with 5+ years of experience designing, shipping, and maintaining production-grade web applications across fintech, SaaS, and education domains. Strong command of Python/Django, Node.js, React/Next.js, and PostgreSQL, paired with hands-on cloud and DevOps experience on AWS (EC2, RDS, S3) with Docker, Nginx, Gunicorn, and CI/CD pipelines. Comfortable owning systems end-to-end — from database schema design and API architecture through to deployment, monitoring, and release automation.

TECHNICAL SKILLS

Backend: Python, Django, Django REST Framework, Node.js, Express.js, FastAPI, RESTful API design, JWT authentication, WebSockets, background task queues (Redis/Celery)

Frontend: React, Next.js, TypeScript, JavaScript (ES6+), Context API, React Query, React Native (Expo)

Databases: PostgreSQL, MySQL, Supabase, Redis — schema design, relational modeling, query optimization, migrations

Cloud & DevOps: AWS (EC2, RDS, S3), Docker, Nginx, Gunicorn, CI/CD pipelines, Vercel, environment management, SSL/TLS configuration, automated deployment scripts

Integrations & Tools: Flutterwave, Cloudinary, Supabase Auth, Stripe, third-party REST APIs, Git, Linux CLI

AI & Automation: Anthropic Claude API, OpenAI API, LangChain, prompt engineering, agentic workflow design — used to ship production features in live products

WORK EXPERIENCE

Full-Stack Developer | [Career On Track](#) Oct 2025 – May 2026

- Architected and shipped a resume analysis feature using LLM APIs and advanced prompt engineering, turning raw job descriptions and resume text into structured, personalized career feedback at scale.
- Built and secured RESTful APIs with role-based access control (RBAC) and JWT authentication, serving a live user base on a Next.js + Supabase stack.
- Designed multi-step backend workflows that extract structured data from unstructured text, score candidates, and generate tailored output autonomously.
- Managed CI/CD pipelines and Vercel deployments, maintaining 99%+ production uptime with zero-downtime release cycles.

Full-Stack Developer | [Serverlink](#) Nov 2024 – Sept 2025

- Built a full-featured School Management System handling student records, attendance tracking, and automated reporting across multiple client institutions.
- Developed an Inventory Management System with real-time stock tracking, purchase order workflows, and dashboard analytics — reducing manual overhead by 60%.
- Engineered MailRu, a CRM and user management platform integrating email workflows and customer data pipelines for streamlined business communications.
- Owned client relationships from requirements gathering through delivery, iterating rapidly on feedback across all active projects.

Founder & Full-Stack Engineer | [QuickCarts \(getquickcarts.shop\)](#) 2024 – Present

- Designed and shipped a multi-tenant SaaS e-commerce platform: React frontend, Django REST backend, PostgreSQL on AWS RDS, load-balanced on EC2 with Nginx and Gunicorn.
- Architected isolated data models per tenant, escrow-based payment processing via Flutterwave, and automated S3 backup pipelines.
- Managed full SSL configuration, wildcard domain routing, Cloudinary media integration, and environment secrets management across staging and production.

- Handled all DevOps work independently: server provisioning, deploy scripts, process management with Unicorn/systemd, and Nginx reverse proxy configuration.

IT Intern | Rivers State ICT Department *Nov 2023 – Mar 2024*

- Designed and launched the Rivers State Ministry of Agriculture website, improving public access to government services.
- Maintained ICT infrastructure including networking equipment, workstations, and CCTV systems across government facilities.

PROJECTS

QuickCarts — Nigerian E-Commerce SaaS — *Django, React, PostgreSQL, AWS EC2/RDS/S3, Nginx, Docker, Flutterwave*

- Production multi-tenant SaaS with isolated store environments, escrow payments, vendor dashboards, and automated media handling via Cloudinary.
- Full DevOps ownership: EC2 provisioning, Unicorn + Nginx setup, SSL via Certbot, deploy automation with bash scripts, and RDS migrations.
- Integrated Flutterwave payment gateway with webhook handling, escrow release logic, and transaction logging.

School Management System — *Django, PostgreSQL, React, REST API*

- End-to-end platform covering student enrollment, class scheduling, attendance tracking, and automated report generation for multiple institutions.
- Designed a normalized PostgreSQL schema handling complex relationships across students, teachers, classes, and academic terms.
- Built a RESTful Django API consumed by a React frontend with role-based views for admins, teachers, and parents.

Inventory Management System — *Node.js, Express, MySQL, React*

- Real-time stock tracking system with purchase order workflows, supplier management, and analytics dashboard used across multiple client businesses.
- Reduced manual stock reconciliation overhead by 60% through automated reorder alerts and audit logging.

LazyApp — Hyperlocal Commerce Platform (In Development) — *React Native, Expo SDK 54, Supabase, Node.js*

- Building a hyperlocal marketplace app for small shop owners with seller onboarding, product listing, and order management features.
- Handling full mobile CI/CD via EAS Build, including Android device debugging with ADB and resolving Gradle/Java compatibility issues.

EDUCATION

B.Sc. Computer Science | Ignatius Ajuru University of Education | 2020 – 2025

- Algorithms, data structures, software engineering principles, and systems design.

CERTIFICATIONS

- Google AI Essentials — Google
- AWS AI Practitioner — Amazon Web Services
- LangChain for LLM Application Development — DeepLearning.AI
- Backend Web Development, Python & Django — Code Camp (2022)
